

To Whom it May Concern:

I'm writing in support of the American Radio Relay League's filing regarding the implementation of broadband-over-powerline (BPL) technology and its potentially disastrous effect on the Amateur Radio service. I'm sure I don't need to inform you of the service(s) that Amateur operators provide in emergency situations that span from the September 11 disaster to last week's widespread power failures in the northeast and midwestern states.

Meanwhile, one only needs to see and hear the video available on the ARRL website at <http://www.arrl.org> to know how BPL technology will completely ruin the HF spectrum for Amateur purposes, as well as others. Please, don't allow this spectrum pollution to become prevalent. I implore you to cease field trials of BPL now and to disallow its commercial development.

Sincerely,
David Maliniak
Amateur Radio station AD2A
